Register cash — your four questions answered

You asked four questions. Two answers are yes, two are no, and the two "no"s matter as much as the yes's.

Your float, checked first. One drawer of 5 tens, 10 fives, 50 ones and a roll each of quarters, dimes, nickels and pennies is **$167.50** exactly. Three of those plus the master till is **$1,502.50** on hand before a single sale. Your original master mix came to $999.50 — the 90 nickels — and you corrected it to 100. That 90-nickel version is now a permanent test: every count in this system states its total twice, once as coins and once as dollars, and when the two disagree it refuses instead of picking a winner.

1. O

1. Opening a till — yes, but only when the money moves

Cash going from the vault into a drawer debits 10110 Cash on Hand — Tills and credits 10100 Cash on Hand — Vault. Two lines, and your total cash is identical before and after. It is a transfer, never income. On an ordinary morning where the float simply stayed in the drawer overnight, nothing moved, so there is no entry — and the system now says ths rnd
